The Mycota – Index Guidelines

Earlier Mycota volumes contained a *Biosystematic Index* and a *Subject Index*, but new Mycota volumes will contain only one combined index.

The index terms should consist of taxonomic entries (species, genus, family names etc.) and entries helping the readers to find passages on particular topics.

Please select and mark both taxonomic & general entries in your chapter using the [Index Function of MS Word](#).

General rules:

- Select only entries of interest to readers.
- In general, an average of 4 entries per book page (= per 700 words) is appropriate.
- Main entries should consist only of a noun (or compound noun); adjectives being given as subentries.
- Try to include several main entries rather than numerous subentries.
- If possible, do not use more than one level of subentry
